WORK EXPERIENCE

Automation Engineer

IPsoft

07/2016 – Present

Amsterdam, The Netherlands

IPsoft makes it possible to transform business performance through the employment of digital labor

Achievements/Tasks

- Single-handedly built the front-end and back-end for Automation Catalogue web application, containing around 500 Automations, their auto-generated documentation and other relevant data to improve both internal SCRUM processes and customer facing sales.
- Cloud Automation Account Lead for one of IPSoft's main customers (over 10k Configuration Items). Dived the account in direct and daily cooperation with 2 Client SME and their Project Manager, being the active part from analysis to implementation, testing and deployment in production.
- Achieving just-in-time and lean production with an international team of 15 Automation Engineers, using modern and Agile tools (Jira, Confluence, Bitbucket's Git repositories, SCRUM meetings with daily sprints).

PERSONAL PROJECTS

Java, Predictive Text - <https://github.com/ltpitt/java-predictive-text> (05/2018 – Present)

- Exploring some of the underlying concepts of using Markov Chain for predictive text using Java classes, interfaces and data structures.
